

# Making the most of the provider resources for embedded and contextualised numeracy

## What are they?

Providers working with the Skills for Life Support Programme in 2009/2010 have developed and shared a whole range of products and resources. There are a wide range of resources – schemes of work, session plans, teaching and learning materials, as well as process documents about how the work was taken forward. Some include links to the provider website or a sample of what has been developed.

Some of the resources for embedded and contextualised numeracy teaching are listed below. The full range of provider-developed resources for numeracy can be accessed [here](#).

## How to use them

These resources have been developed by individual providers to suit their particular requirements and context. Some resources could be used directly by another provider. Others have ideas or examples that might be adapted or might be used to promote discussion. It will be necessary to assess them critically to decide if they are appropriate for your setting and how you might want to use them.

## More about what is available

The table below lists **some** of the resources that support embedded and contextualised numeracy, together with a brief description of what has been developed. Click on the provider name to view the resource.

Context	Health and Social Care
<a href="#">SBC Training</a>	Task sheet, Tutor guides and help sheets for embedding numeracy within NVQ Level 3 Health and Social Care, with a detailed report of the process of development. Resources are in Publisher.
Context	Cookery for community/parents groups
